

## **Welcome to E-PROPS !**

On behalf of the team of Hélices E-PROPS, I would like to welcome you to the company's website.

You will find there the presentation of our 100% carbon propellers for aircraft, designed and manufactured in France, innovative, light and very efficient, which meet a great success, both technical and commercial.

The layout of this site is deliberately sober; the content is mainly technical, rich and detailed, with a lot of information, descriptions, test reports and illustrations.

Our company was created by three passionate people, giving all their time, creativity and energy to develop and propose new solutions to the market to make aircraft safer, quieter, more efficient and more economical.

Our passion is to build a sustainable company, where people are motivated and proud to design, produce and sell great products that give satisfaction to their users. In just a few years, we have built a serious and independent high-tech company that employs 32 people and exports thousands of propellers to over 80 countries, and that's only because our products and services are the best.

Seeing things differently, shaking up the obvious, not stopping at existing concepts and ready-made ideas, exploring new avenues, constantly inventing, imagining, exploring, creating, innovating and innovating again to offer aeronautical products that are always more efficient and safer: this is what leads the E-PROPS team.

In the aeronautical propeller sector, there is still a lot of research to be done, progress to be made and limits to be pushed back... 120 years ago, aviation did not exist !

We wish you a pleasant visit of these pages, hoping that they will make you want to adopt our E-PROPS propellers.

Anne Lavrand  
General Manager - President  
SAS ELECTRAVIA - HELICES E-PROPS

We didn't come out of nowhere :

At the beginning of the 20th century, my great-grandfather Louis Laurent was a blacksmith and wheelwright, and manufactured hubs, wheels and equipment for land vehicles in Aspremont (Hautes Alpes, French Alpen).

A century later, 45 km away, his great-granddaughter runs a company that manufactures propellers and equipment for air vehicles.

*Passion and love of a job well done runs in the family !*

Anne Lavrand
